

Project Title:

HR Payroll Dashboard – Power BI Report

1. Objective:

The objective of this report is to analyze HR payroll data to monitor headcount, salary distribution, deductions, overtime cost, and department-wise payroll trends.

2. Data Source:

The data source used for this dashboard is an Excel file containing HR and Payroll information.

3. Data Cleaning & Transformation:

Basic data cleaning was performed in Excel such as removing duplicates and handling missing values.

Further transformations were done in Power BI using Power Query, including data formatting and column standardization.

4. KPIs Used:

1. Total Headcount
2. Total Deduction
3. Average Salary
4. Total Overtime Cost

5. Key Insight:

The IT department contributes highest share of payroll and overtime cost , indicating a higher workload or critical dependency on IT resources, while Sales department has lowest payroll and overtime cost, showing lower workforce and cost impact.

6. Filters & Interactivity:

Department-wise button slicers, month slicers, and joining date slicers were used to enable dynamic analysis across departments and time periods.

7. Business Value:

This dashboard helps HR and management monitor payroll expenses, control overtime costs, and support workforce planning decisions.
